Introduction:
This instruction can be used in conjunction with
Danfoss Drives High Performance Fieldbus cards. It
briefly shows the most important Technical data for
each Fieldbus we support. For more information or
Technical data please consult the representative
Operating Instruction.

The table shows the supported Fieldbusses:

- These products still support Profibus DPV0, but
  have now been replace with Profibus DPV1.

- Note that the Profibus FMS card has a new
  ordering number, see page 26-27.

- Note that the previous Interbus gateway to
  Profibus is not available anymore.

- The Modbus RTU need to be install in an external
  box by these products. The box is not included.

- VLT 8000 Aqua supports only the LonWorks FTP
  card.

Issued by: John Bargmeyer, DD-OSE
Revision: 3.11
Date: 2003-08-13
Profibus DP V0/V1 card for VLT 5000/6000/8000

This Profibus DP V0/V1 card is only available as a build in, i.e. if the VLT was produce with a Profibus card.
■ **Profibus DP V0/V1 card for VLT 5000/6000/8000**
This Profibus DP V0/V1 card is used in conjunction with a memory card or Sync./Pos card.

■ **Profibus DPV0 card for FMS support**
This Profibus DPV0 card is available to support installations that use the Profibus FMS protocol.
High Performance FieldBus cards

**Profibus data**

- **Profibus connection**

  ![Profibus connection diagram]

  62 = RxD/TxD-P red cable
  63 = RxD/TxD-N green cable

- **Profibus termination**

  By ‘ON’ is the bus termination active.

  ![Profibus termination diagram]

- **LEDs**

  There are 4 LEDs on the PROFIBUS option card:
  - LD1 and LD4: Flashes when the card is communicating.
  - LD2 and LD3: Lights up when the card is initialized and ready to communicate. They will flash while auto baudrate detection is attempting to detect the actual baudrate.

- **Cable length**

<table>
<thead>
<tr>
<th>Transmission speed</th>
<th>Max. total cable length [m]</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6 - 187.5 kBaud</td>
<td>1000</td>
</tr>
<tr>
<td>500 kBaud</td>
<td>400</td>
</tr>
<tr>
<td>1.5 MBaud</td>
<td>200</td>
</tr>
<tr>
<td>3-12 MBaud</td>
<td>100</td>
</tr>
</tbody>
</table>

  Note that these cable lengths are for 1 segment with 31 VLT frequency converter.

- **Cable specification**

  - Impedance: 135 to 165 ohm at a measuring frequency from 3 to 20 MHz
  - Resistance: < 110 ohm/km
  - Capacitance: < 30 pF/m
  - Damping: max. 9 dB over the whole wire length
  - Cross section: max. 0.34 mm², corresponding to AWG 22
  - Cable type: twisted in pairs, 1 x 2, or 2 x 2, or 1 x 4 wires
  - Screening: Copper-braided screen or braided screen and foil screen

  It is recommended to use the same cable type in the entire network to avoid impedance mismatch.

DeviceNet card for VLT 5000/6000/8000

DeviceNet connection for Bookstyle

Device status LED

Network status LED

DeviceNet connection for Compact

Address switch and baud rate setting

$\text{ON} = 0$

$\text{OFF} = 1$
High Performance FieldBus cards

DeviceNet data

■ DeviceNet connection

Termination resistors should be installed at each end of the bus line.

The resistors shall be mounted between terminal 2 CAN_L and terminal 4 CAN_H and should have the following specification:

- 121 Ohm, 1% Metal film and 1/4 Watt

■ DeviceNet termination

■ LEDs

For the device status LED:

1. when the LED is off, the device is off
2. when the LED is green, the device is operational
3. When the LED is flashing green, the device is in standby
4. when the LED is flashing red, the device detects a minor fault
5. when the LED is red, the device detects an unrecoverable fault
6. when the LED is flashing red/green, the device is self-testing

For the network status LED:

1. when the LED is off, the network is non-powered/not online
2. when the LED is flashing green, the network is online but not connected
3. when the LED is green, the network is online and connected
4. when the LED is flashing red, the network has a connection time-out
5. when the LED is red, the network has a critical link failure.

■ Cable length

<table>
<thead>
<tr>
<th>Transmission speed</th>
<th>Max. total cable length [m]</th>
</tr>
</thead>
<tbody>
<tr>
<td>125 kbps</td>
<td>500</td>
</tr>
<tr>
<td>250 kbps</td>
<td>250</td>
</tr>
<tr>
<td>500 kbps</td>
<td>100</td>
</tr>
</tbody>
</table>

■ Cable specification

- Cross section: max. 0.78 mm², corresponding to AWG 18
- Cable type: twisted in pairs, 2 x 2 wires with drain wire in center
- Screening: Copper-braided screen or braided screen and foil screen

It is recommended to use the same cable type in the entire network to avoid impedance mismatch.

■ Address and baud rate setting

Dip switch 1-6 set the VLT frequency converters address and 7-8 the baud rate.

If the address shall be set to 3 the dip switches should be set as follow:

Switch Settings for DeviceNet Module Baud Rate:

<table>
<thead>
<tr>
<th>Baud Rate</th>
<th>Switch Setting</th>
<th>Switch Setting</th>
</tr>
</thead>
<tbody>
<tr>

- Top connector
- Network LED

### Modbus+ card VLT 5000 Compact

- Side connector
- Address switch
High Performance FieldBus cards

Modbus Plus data

■ Modbus connection

![Modbus connection diagram]

NOTE: Drain wire and shield should be insulated.

■ Modbus termination

It is essential that the bus line be terminated properly. A mismatch of impedance may result in reflections on the line that will corrupt data transmission.

The Modbus Plus Option card is provide with a pluggable screw connector for 176F1551 (Compact units) and a DB9 connector for 176F1550 (Book-style units). An adaptor cable number 190703 is required for use with 176F1551.

Mating network connectors should be ordered from MODICON:
P/N AS-MBKT-085, (1) in-line connector
P/N AS-MBKT-185, (2) terminating connectors

■ LEDs

Modbus Plus status is shown by flashing a repetitive pattern on the network indicator (green LED). The patterns are:

- Six flashes per second;
  The node’s normal operating state. The node is successfully receiving and passing the token. All nodes on the network should be flashing this pattern.

- One flash per second;
  The node is off-line after just being powered up, or after exiting the four flashes per second mode.

- Two flashes, then OFF for two seconds;
  The node is hearing the token being passed among other nodes, but is never receiving the token. Check the network for an open circuit or defective termination.

■ LEDs

- Three flashes, then OFF for 1.7 seconds;
  The node is not hearing any other nodes. It is periodically claiming the token, but finding no other node to which to pass it. Check the network for an open circuit or defective termination.

- Four flashes, then OFF for 1.4 seconds;
  The node has heard a valid message from another node that is using the same address as this node. The node remains in this state as long as it continues to hear the duplicate address. If the duplicate address is not heard for five seconds, the node then changes to the pattern of one flash every second.

NOTE: LED patterns other than those shown above indicate a possible hardware problem.

■ Cable specification and length

The recommended Modbus Plus cable is Belden 9841, shielded twisted pair.
Minimum length between nodes ......................... 3 m
Maximum length without repeaters .................... 450 m

■ Address and baud rate setting

Dip switch 1-6 set the VLT frequency converters address. Dip switch are not 7-8 used.

![Dip switch diagram]

ON = 0
OFF = 1

The address of the VLT frequency converter will be one higher than the binary value. With the above settings of the dip switches the address will be 4. NOTE: Changes in switch settings are only active after power up.

■ Modbus Plus literature

Operating Instruction ....................... MG.10.M1.22
Modbus ............................... Modbus Plus Tech note
Modbus RTU card

The Modbus RTU option card is a gateway that translates Modbus RTU telegrams to Danfoss FC protocol. As the FC protocol is integrated in all VLT frequency converters as standard, the Modbus RTU can interface to all our drives except for the DMS 300.

The Modbus RTU can be built into the control cassette of the following products:

- VLT 5000
- VLT 6000 HVAC
- VLT 8000 AQUA

With VLT 5000 Flux, VLT 2800, FCM 300 the Modbus RTU card must be mounted into an external box. The code number for the Modbus RTU option card is 175Z3362.
High Performance FieldBus cards

Modbus RTU data

■ Modbus RTU connection

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

■ Connector from Modbus RTU to VLT

- 24V in to terminal 12 or 13
- RTxD to terminal 69 (+)
- Com to terminal 39
- RTxD' to terminal 68 (-)
- (spare)
- (spare)

■ LEDs

There are 2 LEDs on the Modbus RTU option card. Both LEDs use the same communication pattern:

- Flashing Green (1 Hz): Communication online (VLT LED) or receiving data (Modbus LED).
- Flashing Red (1 Hz): Communication time out
- Solid Red: Major fault, communication stopped

■ Baud rate and parity Dip switch

This Dip switch sets the baud rate and the parity on the Modbus network.

- The baud rate can be set to 4800, 9600 (default) or 19200 baud by switches 1-3.
- The parity bit can be set to None, Odd or Even (default) by switches 4-5.

See the Modbus manual for the Dip switch settings. Switches 6-8 are reserved switches.

■ Address and termination Dip switch

This Dip switch sets the Modbus address and the termination.

- The address can be set by switches 1-8. Default address is 1.
- The termination can be set by switch 9. Default termination is ON.

See the Modbus manual for the Dip switch settings.

■ VLT parameter settings

As the Modbus RTU card interface to the built-in RS-485 FC profile the following parameters must be set in the VLT:

**VLT 5000/VLT 2800/FCD 300/FCM 300:**
- Parameter 500 Address: 001
- Parameter 501 Baud rate: 9600 baud
- Parameter 512 Profile: FC protocol

**VLT 6000/VLT 8000**
- Parameter 500 Profile: FC protocol
- Parameter 501 Address: 001
- Parameter 502 Baud rate: 9600 baud
Lonworks cards VLT 5000/6000/8000 Free Topology

- **LEDs**

  There are 2 LEDs on the LonWorks option card:
  - Green LED: Status LED
  - Red LED: Service LED, see LonWorks manual.

  The Status LED patterns are:
  - **ON**
    - There is power on the board but there has not been any communication to an input network variable in the last 2 seconds.
  - **Flashing 10 times per second**
    - There is regular network communication to the VLT’s input network variables.
  - **Flashing intermittently**
    - There is network communication to the VLT’s input network variables but input network variables are received at a period greater than 2 seconds.
  - **Flashing 5 times per second**
    - The response to the network management "Wink" command. The VLT LonWorks node must be reset to leave the wink state.

  - **OFF**
    - No power on board or hardware fault.

- **Cable length**

**FCD 300 Plug 175N2279**

The DeviceNet bus connection can be performed through a plug, that is to be mounted in the FCD 300 housing (M16 gland hole) and wired to the inside terminal strip.
■ FCD 300 AS-i bus card

■ FCD 300 AS-i connection
The AS-i bus lines are to be connected to terminals 68 and 69 of the internal terminal strip. A round drop cable can be wired directly into the terminals by using a cable gland. A sealed M12 connector can be mounted into one of the M16 gland holes in the FCD enclosure. The M12 connector is to be wired to the terminals 68, 69 on the control terminal block. The connection is in the following way:
- AS-i + to 68
- AS-i - to 69.

■ FCD 300 AS-i Plug 175N2281
The AS-i bus connection can be performed through a plug, that is to be mounted in the FCD 300 housing (M16 gland hole) and wired to the inside terminal strip.
- Pin 1 (Brown) to AS-i + (68)
- Pin 3 (Blue) to AS-i - (69)
DMS 300 Profibus card

Profibus connection

Profibus termination

AKD Lon card

The AKD Lon card can only be used together with AKD 2800 and AKD 5000.

Adap-Kool
Lon connector

Connector to VLT terminals
Miscellaneous, Accessories to Fieldbus

VLT 3000 to 5000 converter software (17.1x):
The VLT 3000 to 5000 converter is a special software version which is intended to convert a VLT 3000 to a VLT 5000, which replaces the VLT 3000. The converter software is typical used to replace a VLT 3000 with a Profibus interface, but it can also replace a VLT 3000 in a RS-485 network.

With the converter software we only support Profibus DP Norm, so a replaced VLT 3000 should have a software version 3.00 or higher. The software version number can be read out in parameter 603, choice 3.

To purchase (obligatory):
- VLT 5000 ................................................ 175XXXXX
- Converter software 17.1x ....................... 175z3389

Optional:
- Profibus option excl. memory option ...... 175z0402
- Backplate for 5001-5005 Compact IP 20 ordering no. ............................................. 175Z2349
- Separate relay card................................. 175Z1814

If two high voltage relays are needed in VLT 5000 a separate relay card must be purchased.
- Ordering number .................................176F1814

See also the VLT 3000 to 5000 converter manual MG.50.Q1.02.
Miscellaneous, Accessories to Fieldbus

Profibus kit for SUB D9 connection:
This kit can be mounted together with a VLT 5000/6000/8000 Profibus card and the standard SUB D9 Profibus connector can be used.

Product | Ordering number
--- | ---
VLT 5001-5027 230 V | 175Z3568
VLT 5032-5052 230 V | 176F1822
VLT 5001-5102 400 V | 175Z3568
VLT 5125-5500 400 V | 176F1822
VLT 6002-6032 230 V | 175Z3568
VLT 6042-6072 230 V | 176F1822
VLT 6002-6122 400 V | 175Z3568
VLT 6150-6550 400 V | 176F1822
VLT 8002-8032 230 V | 175Z3568
VLT 8042-8072 230 V | 176F1822

VLT 8150-8550 400 V | 176F1822

Top connection of Fieldbus by IP 20 Unit:
It is now possible to make a top connection of the Fieldbus cable by all IP 20 units by VLT 5000/6000/8000. The connection will be similar to a book style connection.

The top connection can be done on all VLT 5000/6000/8000 IP 20 unit that are produce from the week 15 2003 (G363) except VLT 5032-5052 230 V, VLT 5125-5500 400 V, VLT 6042-6072 230 V, VLT 6150-6550 400 V, VLT 8042-8072 230 V and VLT 8150-8550 400 V.

Top connection on VLT 5072-5102, 6102-6122 and 8102-8122 is available from week 36 2003.

It is also possible to retrofit VLT 5000/6000/8000 IP 20 unit with a clamp (175Z3477), so that a top connection can be done.
In this case the Drive need to be produce after week 23 2002 (G232)

By VLT 5072-5102, 6102-6122 and 8102-8122 can the kit first by install from week 36 2003 (G363).
