Güdel’s modules can move loads weighing anywhere between a few kilos and several tons, depending on the application and the industry.

**Linear track modules for robots**
The TMF and TMO trackmotion series have proven track record in logistics and in the aerospace and automotive industries. Because both series comprise a well-selected range of different sizes, we can always provide the right solution for any type of robot and any application.

**Typical uses:**
- Welding
- Plasma cutting
- Mechanical finishing
- Casting
- Packaging

**Triple-axis linear module**
The combined linear modules of the CF series have extensive uses in various industries and applications. Because of their long travel, great accuracy, and good rigidity, these linear modules meet a wide range of requirements fully.

**Loading of:**
- Injection moulding
- High pressure die casting
- Machining centres
- Machine tool

**Typical uses:**
- Packaging
- Polishing
- Joints (glued, welded, screwed)
- Cutting
- Assembly
- Testing

Güdel’s modules can make full use of the space available and are very easy to integrate.

**Triple-axis linear module with toothed belt**
This compact series, with its integrated drive unit from Güdel, is particularly suitable for applications in packaging and logistics, in the food and pharmaceuticals industries and in general handling. These linear modules are all highly dynamic and generate very low noise levels.

**Typical uses:**
- Packaging
- Polishing
- Joints (glued, welded, screwed)
- Cutting
- Assembly
- Testing

Güdel’s linear modules for gantry robots – the right solution for every requirement.
Using our single- and multi-axis linear modules, we can readily provide all kinds of solutions that are dynamic, accurate and barely audible.
Güdel’s modules can move loads weighing anywhere between a few kilos and several tons, depending on the application and the industry.

Linear track modules for robots
The TMF and TMO trackmotion series have proven track record in logistics and in the aerospace and automotive industries. Because both series comprise a well-selected range of different sizes, we can almost provide the right solution for any type of robot and any application.

Typical uses:
- Welding
- Plasma-cutting
- Mechanical finishing
- Casting
- Packaging

Triple-axis linear module
The controllable linear modules of the CP series have extensive uses in various industries and applications. Because of their long travel, great accuracy and good rigidity, these linear modules meet a wide range of requirements fully.

Loading of:
- Injection moulding
- High-pressure die-casting
- Machining centres
- Machine tools

Typical uses:
- Packaging
- Polishing
- Joints (glued, welded, screwed)
- Cutting
- Assembly
- Testing
